### Acknowledgments

The 1999 Iowa Youth Survey would never have been completed without the assistance and support of several organizations and individuals. First and foremost, we would like to thank all the district superintendents, principles, teachers, counselors, facilitators, parents and students for an incredible group effort. The survey went from a sample of 26,200 students in 1996 to over 85,000 students in 1999. This was a huge shift logistically. We appreciate that you all made room in your busy schedules to accommodate this extensive survey.

The other individuals and organizations that were involved in this collaborative effort are too numerous to mention in detail, but they include individuals from the state's universities, state and local governmental agencies, youth organizations, youth service providers, and private enterprise. Each and everyone who participated provided invaluable input into the product of those efforts, the 1999 IYS reports.

Thank you all for being a part of a landmark collection of data on Iowa's youth.

### **Important Information About This Report**

#### What Can I Do With This Data

The 1999 Iowa Youth Survey (IYS) county reports were designed to help counties identify youth development related needs, develop relevant programs, and assess the outcomes of those programs. These data can help you better understand the young people in your county and their needs. They can also help you assess the strengths and weaknesses of your schools, families, and communities from the students' perspective.

You will find these reports to be valuable in obtaining funds for a wide variety of programs. It is our expectation that school personnel, parents, youth, and other community members will come together to study the 1999 reports and open a dialog regarding what this data says about life for young people in your county. As a result, all concerned groups will be better equipped to address the needs of the youth in your communities. At every step of the process, from needs identification, to program development and implementation, to program assessment, the 1999 IYS data will prove to be a valuable resource.

#### **Overview and Comparison to Previous Surveys**

Survey scope. The 1999 Iowa Youth Survey is the ninth in a series of youth surveys that have been completed every three years since 1975. The 1999 IYS is different from previous years in both the procedures used to implement the survey and the students that were asked to participate. Previous surveys were given to approximately one-third of Iowa's school districts and a sample of students in their 6th, 8th, 10th and 12th grades. The 1999 IYS sought participation from *all* school districts and *all* students in grades 6, 8 and 11, as well as 14-18 year-old students in alternative programs. These changes make it possible to provide youth development-related data for each participating school, as well as for each county in which participating students reside. They also make it more feasible to use IYS results to assess the outcome of community and school youth development programs. The changes do, however, restrict direct comparisons with previous surveys to grades 6 and 8, and to the schools that participated in those surveys.

At least some survey questionnaires were completed in 329 of Iowa's 375 school districts and the laboratory school located at the University of Northern Iowa. A total of 85,552 students across the state completed the Iowa Youth Survey, with each county in Iowa represented by at least 100 students.

Survey content. The 1999 IYS questionnaire includes questions about the students' behaviors and attitudes/beliefs, as well as their perceptions of their peer, family, school, and neighborhood/community environments. Prior research has shown that each of these environments plays a significant role in positive youth development. Selection of specific survey questions was based on a combination of: 1) analysis of data collected in previous Iowa surveys; 2) a literature review of the established youth development models, especially those that enjoy some acceptance in Iowa; and 3) discussion sessions with youth development professionals (community service providers, school district personnel and academics).

The general content of the questions included in the 1999 IYS is similar to that of previous surveys. Most of the items are relevant to the constructs on which previous Iowa Youth Surveys were based. However, specific questions from previous surveys were often modified, and some questions were eliminated and new questions added. Among the new additions are alcohol expectancy questions that assess student beliefs about what benefits can be derived from drinking alcohol. Such expectancies may be positively affected by educational and other types of interventions.

The appropriateness of any comparison between the 1999 IYS and previous surveys must be considered on a question-by-question basis. Trend analyses for the most part should be considered exploratory at best. If comparisons are made, this report may make your county *appear* to be significantly different, for better or worse, from any county reports generated by previous surveys. This appearance may be due to differences in question wording and the representativeness of the sample rather than to actual changes in the students residing in your county.

#### **Data Cleaning/Editing**

*Validity checks.* The 1999 IYS questionnaire, like its predecessors, is a self-administered questionnaire that relies on each student's ability to read (a few students did have the questionnaire read to them) and honestly respond to each question. Such self-reported behaviors and attitudes/beliefs are always subject to falsification, either intentionally (denial, boasting or just mischievousness) or unintentionally (mistakenly filling in the wrong circle, misreading, etc.). Each questionnaire was reviewed for evidence that would support a claim that the respondent had little or no intention of making an honest effort to complete the 1999 Iowa Youth Survey. This evidence consisted of such things as inconsistent responses (e.g., indicating use of substances on one question but denying ever using them on another), improbable responses (e.g., using every illegal drug every day), and patterned responses (answering a series of questions exactly the same way). There were a total of 27 such validity checks made. A total of 126 questionnaires failed 5 or more of the 27 validity checks, and these questionnaires were deleted from the data file used to generate the 1999 IYS reports. This left a total of 85,426 useable questionnaires.

*Other cleaning*. In addition to the validity checks described above, some individual questions in the 1999 IYS questionnaire were found to have student responses that were improbable or erroneous. These questions included county of residence and age.

<u>County of residence</u>. When we compared county of residence to the county in which the school district was located, we found students from nearly every school district across the state reporting that they resided in Iowa County. It was evident that there were several students confusing their county of residence with their state of residence. There were similar problems involving county and city confusions (e.g., Des Moines). There were also several students (about 1,400 or 1.6%) who provided a response that could not be used to clearly identify a county of residence.

Because of these problems, the county of residence responses were modified in the following two ways: 1) The county in which each school district's administrative office was located served as the focal county for that district. Any response to the county of residence question that was not the focal county, or one of the counties that shares a geographic border with that county, was converted to the county that the majority of students from that school district claimed as their county of residence. 2) If a student provided no useable response for county of residence, the county that the majority of students from that school district claimed as their county of residence was assigned to those students. While these modifications will still allow for some students being assigned to the wrong county of residence and even a few who might have been taken out of the correct county and put into an incorrect one, the modified version of county of residence is much more likely to contain fewer errors than the unedited county of residence responses.

<u>Age</u>. Some responses to the age question in the 1999 IYS were also modified. There were several instances where only one digit of the age response was reported. If the missing digit was the first digit, and the second digit was consistent with an age that was appropriate to the respondent's reported grade in school, the missing first digit was replaced with a "1". The same procedure was used to convert a "0" to a "1" if the age response was "08" or less. *For example*, if a student reported he/she was in the 8th grade and reported an age of 03 (0 for the first digit and 3 for the second digit), the age response was changed to 13 (1 for the first digit and 3 for the second digit). This editing affected less than 500 of the total questionnaires. After the above changes were made, any student that was left who reported an age of less than 10 or more than 19 (less than 200 students) was converted to missing data on age.

The responses to all other questions remain unchanged from those actually provided by the students. In every instance it is important to remember that the responses recorded are each student's *perceptions*, not necessarily the actual state of the environment they are describing. Still, a case can be made that students almost surely behave *in response to their perception* of what is going on, and it is their perception, then, that is most important.

#### **Confidentiality-Related Data Restrictions**

Protecting the confidentiality of the students who participated in the 1999 Iowa Youth Survey is of primary importance. While there is no way for an individual student to be connected with his or her particular responses, there are circumstances in which all students, and in turn each individual, may be connected to a particular behavior or attitude. As well, there are circumstances that increase the likelihood of someone making inferences about particular students from the data. If, for example, all 11th graders in a school district reported that they drank alcohol, essentially every 11th grade student can be identified as a drinker. Further, if 96% of students reported drinking, someone could assume that any given student is a drinker and have a 96 in 100 chance of being right.

**Management of confidentiality issues.** The confidentiality concern in the county reports was limited to a small number of counties with relatively few students in one or more of the 6th, 8th, and 11th grades participating. The reports for these counties with the smallest number of participants (less than 50) were individually reviewed for circumstances such as those described above.

To address potential confidentiality problems, certain questions and accompanying responses were identified as sensitive (potentially harmful or embarrassing). For example, it is not likely that anyone would be harmed if all the students in a county responded that they did not use cocaine, but it might be harmful or embarrassing if all the students reported that they drank alcohol.

For this subset of sensitive questions, any time less than 10% or fewer than 4 of the students do not respond in the *least* sensitive manner, the actual percents will not be reported. Instead, either a "†" or "‡" will appear in that column for each response. The "†" will indicate that *less than 10%* of the students reported a particular response or set of responses. The "‡" will indicate that *90% or more* of the students reported a particular response or set of responses. *For example*, if more than 90% of students in the county responded that they drank 1-2 times, 2-3 times, etc., the symbol "‡" will appear in those response cells. In the remaining response cell, the symbol "†" will appear to indicate that less than 10% (or fewer than 4 students) reported that they drank 0 times.

#### **Specific Report Content**

**Principal components of report.** The actual data provided in your 1999 IYS county report include the responses to every question that appears in the 1999 questionnaire. There are essentially eight columns on each page of the report. The symbol "--" appearing in any column indicates data that is either not reportable or not applicable. Also, "0%" appearing in any column represents *anything less than 0.5%* (including 0, or none).

The **first column** includes an abbreviated version of the question (followed in parentheses by its section and question number on the 1999 Iowa Youth Survey questionnaire), a "response" row for each response, and the "% who answered question" row. This last row in each set of responses includes the percent of students in the county who responded to that question (number of students that responded to the question, i.e., did not leave it blank or provided an unreadable response, divided by the number of students who completed a useable 1999 IYS questionnaire).

A low percentage in this row would indicate that several of the students did not, for one reason or another, answer that question. In general, the higher this percentage, the more likely the responses in the remaining rows are representative of the students in your county. All the percents in the "response" rows are based on the number of students who answered the question. Students who left the question blank or provided an unreadable response are not included.

The **second column**, titled "**Weighted County**," includes the percent of students who reported each of the responses (number of all the students in your county reporting each response divided by the number of all students who answered that question and completed a useable questionnaire from your county). There were several schools that completed widely varying proportions of the students in their grades 6, 8 and 11, and these differences present a significant potential for biases in the "Weighted County" column. Given that  $11^{th}$  graders are much more likely to be substance users than either  $6^{th}$  or  $8^{th}$  graders, any significant discrepancy between the proportion of  $11^{th}$  grade students and the other grades who took part in the 1999 IYS would produce a distorted total estimate for that county (i.e., a larger proportion of  $11^{th}$  graders and a smaller proportion of  $6^{th}$  and  $8^{th}$  graders would produce an artificially high total substance use estimate in that county).

In the school district reports, this source of bias was minimized by withholding certain data from those schools that did not complete 75% or more of their students from each grade. It was addressed in the Area Education Agency (AEA) reports by limiting the report to only those schools that completed 75% or more of the students in each grade. This solution, however, would leave many counties with very few or no students. For the county and state reports, this problem was minimized by a statistical weighting procedure.

Weighting. Unfortunately, we could find no current data base that included the number of students enrolled in grades 6, 8 and 11 in each county. However, by combining the IDOE enrollment records with the county of residence reported by the students who participated in the 1999 IYS, we were able to estimate the number of 6<sup>th</sup>, 8<sup>th</sup> and 11<sup>th</sup> grade students enrolled in each county. From these numbers, an estimate of the proportion of students in each of the grades 6, 8 and 11 was computed (estimated number of students in each grade level divided by the sum of the estimates for grades 6, 8 and 11). This proportion was compared to the proportion of 6<sup>th</sup>, 8<sup>th</sup> and 11<sup>th</sup> graders who completed a useable IYS questionnaire in each of the grades in each county. The estimated proportion of students enrolled in each county was divided by the proportion actually completing an IYS in each county, and this decimal was the weighting factor used in the "Weighted County" column. Responses from students that did not report a grade level were left unchanged (i.e., assigned a weight of 1).

This weighting procedure is based only on the school districts that participated in the 1999 IYS. A list of the school districts that *did not* participate and the county numbers in which their administrative offices are located is provided on page 39. The more school districts you find on this list that serve a large number of students from your county, the less likely the weighting procedure was successful in reducing biases and the less likely the reported percentages in the "Weighted County" column are accurate estimates of the students' attitudes and behaviors that reside in your county. However, the weighted prevalence rate estimates for each response in the "Weighted County" column are the best estimates available at this time.

The number of participating students in your county is listed on page 38, with breakdowns by grade level and gender. If this number in any of the grade level columns is less than 50, this is another indication that the "Weighted County" column is less likely to be accurate.

The **next three columns**, titled **"By Grade Level in Your County,"** are *unweighted* percents based on the responses of all the students in your county who answered the question and reported that they were in either grade 6, 8, or 11.

The **next two columns**, titled **"By Gender in Your County,"** are *unweighted* percents based on the responses of all the students in your county who answered that question and reported that they were either male or female.

The **final column** in the 1999 IYS county reports, titled "**Weighted State**," includes percents that can be used to make comparisons with the "Weighted County" column. In order to minimize the aforementioned grade-proportionality biases with respect to these comparisons, the "Weighted State" column is weighted by grade to match state enrollment figures for grades 6, 8, and 11. For more details regarding this weighting procedure, please refer to the 1999 IYS State of Iowa report.

*Substance use prevalence rates*. Page 40 of the data portion of the 1999 IYS county reports includes a summary that focuses on ever and current (last 30 days) alcohol, tobacco and other drug (ATOD) use prevalence rates.

<u>Tobacco</u>. The "any tobacco use--current" prevalence rate includes all those students who indicated that they had used a tobacco product in the past 30 days: cigarettes, cigars or smokeless. These students include those who reported that they smoked at least part of a cigarette, or some days of smoking cigarettes or cigars, or used smokeless tobacco in the last 30 days. The respective IYS section and question numbers are: B12, 23-24 and 31. The "any tobacco use--ever" prevalence rate includes all those students who reported any of the following: that they smoked at least a part of one cigarette in the last 30 days; that they had ever tried to quit smoking cigarettes; an age when they started smoking cigarettes; some days of smoking cigarettes or cigars in the last 30 days; or that they used smokeless tobacco (B12-14, 23-24 and 31).

The "cigarette use--current" prevalence rate includes those students who reported they smoked at least a part of one cigarette in the last 30 days, or reported some days of smoking cigarettes in the last 30 days (B12 and 23). The "cigarette use--ever" prevalence rate includes those students who reported that they smoked at least a part of one cigarette in the last 30 days, that they had ever tried to quit smoking cigarettes, reported an age when they started smoking cigarettes, or reported some days of smoking cigarettes in the last 30 days. The respective IYS section and question numbers are: B12-14 and 23. The "cigar use-current" prevalence rate includes those students who reported some days of smoking cigars in the last 30 days (B24). No "cigar use--ever" prevalence rate is available. The "smokeless tobacco use--current" prevalence rate includes those students who reported using smokeless tobacco in the last 30 days (B31), and the "ever" prevalence rate includes those who reported that they had ever used smokeless tobacco (B31).

<u>Alcohol</u>. The "any alcohol use--current" prevalence rate includes those students who had at least one drink (beer, wine, or liquor) in the last 30 days, or reported having 5 or more drinks on at least one day in the last 30 days. The section and question numbers from the 1999 IYS questionnaire that are respectively associated with these criteria are: B25 and 21. The "any alcohol use--ever" prevalence rate includes those students who reported an age that they started drinking, or drank 5 or more drinks on at least one day in the last 30 days, or had at least one drink in the last 30 days. The section and question numbers respectively associated with these criteria are: B15, 21 and 25.

<u>Drugs</u>. The "any drug use--current" prevalence rate includes those students who reported some use of a drug (marijuana, inhalant, methamphetamine, cocaine, amphetamine other than meth, steroid, or other illegal drug) in the past 30 days. The section and question numbers associated with these criteria are: B26-30 and B32-33. The "any drug use--ever" prevalence rate includes all those students who indicated that they had ever used any of these drugs. These students include those who reported either an age for first using any one of these drugs, some use of these drugs in the last 30 days, or some ever use of steroids or other illegal drugs (B16-20; B26-30 and B32-33). The "current" prevalence rate for each type of drug includes those students who reported some use of that drug in the last 30 days (B26-30, 32-33). The "ever" prevalence rates for each type of drug includes those students who reported either an age for first using that drug (B16-20), use of that drug in the last 30 days (B26-30) or some use ever of steroids and other illegal drugs (B32-33).

#### **Some Cautions Regarding Interpretation**

The county reports are more subject to sampling error than any of the other IYS reports. The absence of all or a large majority of students from any school district in any county has the potential to produce significant biases. The only way that no biases could be introduced is to assume that the missing school district students are exactly like the students from the participating school districts in that county. While this may be more likely to be true in Iowa than in other states, this assumption is probably, to some extent at least, not completely true. Still, the percentages reported in the county reports are the best that can be obtained at this time. They can, and should, be taken into consideration for planning purposes, but they also should be confirmed by other sources of data whenever possible.

The response percents that are reported for any one question might total to slightly less or more than 100%. This is due to rounding, not an error in the reported percents.

#### **Other Reports That Are Available**

**State and AEA.** Coinciding with the distribution of the county reports, AEA and state level reports will be made available to the public. These reports will be different in some respects from the county reports, but counties will be able to use these reports to help integrate their county-specific data with AEA and state level aggregates. These reports will be available on the IDOE's website: <a href="https://www.state.ia.us/educate">www.state.ia.us/educate</a>.

**Planning regions**. Later in the year, additional reports will be released that are based on other regional planning categories. These will include Iowa Department of Public Health's substance abuse treatment and prevention planning regions, Iowa Department of Human Services regions, decat regions, and judicial districts. These regional reports, along with county and state reports, will be available on the Iowa Youth Survey website: <a href="https://www.state.ia.us/dhr/cjip/ythsurvey.html">www.state.ia.us/dhr/cjip/ythsurvey.html</a>, and through links on the websites of the other state agencies funding this study.

Customized reports. Finally, the Iowa Consortium for Substance Abuse Research and Evaluation will be able to provide customized reports to counties that might want to request them. Each request will be considered from both a feasibility and a cost perspective on a case-by-case basis. Anyone who desires other kinds of data analysis should contact Kristin White at the Iowa Consortium for Substance Abuse Research and Evaluation, University of Iowa, Iowa City, IA 52242. The telephone number is (319) 335-4494, fax number is (319) 335-4484, and e-mail is <a href="mailto:kristin-l-white@uiowa.edu">kristin-l-white@uiowa.edu</a> (the middle initial is a lower-case "L"). At this time there are no set regulations regarding costs or time frames with respect to such special requests, but the Consortium will make every effort to accommodate the needs of anyone requesting additional data analyses.

#### Where Do We Go From Here

*Short term.* Over the next several months we will be offering workshops that will help everyone make maximum use of the data included in the 1999 IYS reports. Technical assistance seminars will be scheduled throughout the year and offered at various conferences. We encourage everyone to attend one or more of these sessions.

**Long term.** Our goal is for the 1999 Iowa Youth Survey to be replicated in 2- or 3-year intervals with continuous improvements. This year's survey has been a learning experience for all parties involved, and with the knowledge gained we expect subsequent surveys to be even more successful. Your comments and suggestions have been, and will continue to be, invaluable planning and implementation resources.

*Targeted Improvements*. The Iowa Youth Survey is a work in progress, and to further that progress we hope to make the following improvements: 1) Persuade every school district in the state to participate in subsequent surveys; 2) Increase the percentage of students participating, with target percentages for designated grades reaching 85%, with the ideal being a full census (100%). Many of the reporting issues regarding potential biases and comparability will diminish as the number of students involved approaches a full census. 3) Develop a questionnaire that might be more appropriate to 4<sup>th</sup>, 5<sup>th</sup> and 6<sup>th</sup> grade levels; and 4) Involve private and parochial schools. This will provide these schools significant planning-related data, and provide a more comprehensive picture of all students in each county and the state. We welcome and encourage your assistance in making these improvements.

### **If You Have Questions**

It was not possible to explain in detail every procedure used to compile these reports. If you require a more detailed description of procedures mentioned here or have general questions, please feel free to contact the Iowa Consortium as described on the previous page. While we have limited resources, we will make every effort to promptly respond to your requests.

# $Part\ I$ of this report contains information about the students' attitudes.
